

STANDARD

EXTENDED

549 LATCH STRIKES

Standard and extended strikes designed for use with the 549/8813 Mortice Latch. Strikes in this size in stainless steel are kept in stock.

For additional information on extended 549 Latch Strikes please see the extended strike sheet in the technical section of the website.

Please note:

- Latch strike plates are 'bent' along the leading edge, to allow the smooth sliding of the latch tongue over the architrave and into the strike. 549 Strike plates are universal.
- Strike plates in stainless steel are 2mm thick.
- Stainless steel strike plates coloured to other finishes will require additional time to electroplate – additional cost will be advised before proceeding.
- Strike plates for rebated doors can also be provided – please contact your local Halliday + Baillie for further information.
